                                             BACISRH3

4186 bp DNA linear BCT 17-FEB-1998
Bacillus thuringiensis israelensis plaemid gene for 130 kDa
insecticidal protein (ISRH3), complete cds.
D00247

130 kDa insecticidal protein (ISRH3).
Bacillus thuringiensis serovar israelensis
Bacillus thuringiensis serovar israelensis
Bacillus thuringiensis serovar israelensis
Bacillus thuringiensis serovar israelensis
                                                                                                                                                                                                                                                                                                                                                                         protein genes of Bacillus thuringiensis var. israelensis Agric. Biol. Chem. 52, 873-878 (1988)
The genes of ISRH3 and ISRH4 that were 130 kDa insecticidalu proteins of BII were sequenced and compared with other insecticidal protein genes. ISRH3 and ISRH4 were identical in a region of the C-terminal 467 amino acids.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  2424

Determination of this BAC-and sequence was carried out as part of collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; cn bw sp, the same strain used for the BDGP's PI and BST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.
units. For more information on RescueMu, go to the web state 'www zmdb.iastate.edu' and follow the linke for 'RescueMu' 'Grid S was grown at San Diego in 2002. DNA was extracted from leaf strips, double digested using BamHI and Ball, and ligated to form circular plasmids. DH10B cells were transformed and then screened on LB plates with ampicillin."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           CNS0039G 1101 bp DNA linear GSS 03-JUN-1999

/clone_lib="lil8" | RescueMu Grid S" | /clone_lib="lil8" | Vector: RescueMu (engineered from pBlueScript backbone); Site 1: BamHI; Site 2: BglII; RescueMu is a 4.9 kb, modified maize Mu transpason designed to allow plasmid rescue from total genomic DNA. Mu elements insert preferentially into transcription units: For more information on RescueMu, go to the web site 'www.zmdb.iastee.edu' and follow the links for 'RescueMu.' Grid S was grown at San Diego in 2002. DNA was extracted from leaf strips, double digested using BamHI and BglII, and ligated to form circular plasmids. DH10B cells were transformed and then screened on LB plates with ampicillin."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        3942 GTAACCAAGGGCATAACTCTGGCTGTACATGTAATCAAGGATATAACCGTTA-ACGATTC 4000

designed to allow plasmid rescue from total genomic DNA.
Mu elements insert preferentially into transcription
units. For more information on RescueMu, go to the web
site 'www.randb.iastate-edu' and follow the links for 'RescueMu.' Grid S was grown at San Diego in 2002. DNA was
extracted from leaf strips, double digested using BamHI
and BglII, and ligated to form circular plasmide. DH108
cells were transformed and then screened on LB plates with
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     3881 TCTAGTAATATGTATAATCAAAATTATACTAACAATGATGACCTGCATTCCGGTTGCACA 3940
